The collectible card game Magic: The Gathering published seven expansion sets from 1993-1995, and one compilation set. These sets contained new cards that "expanded" on the base sets of Magic with their own mechanical theme and setting; these new cards could be played on their own, or mixed in with decks created from cards in the base sets. With Magic 's runaway success, many of the ...

The Mimic is a sporadic boss who can be fought by presenting a mimic casket to the strange casket found upstairs in Watson's house. Mimics can be obtained from an elite or master reward casket after asking the strange casket to enable the chance to obtain a mimic casket (which is disabled by default). The elite reward casket has a 1/35 chance of being a mimic, while master reward caskets have ...

The kinase activity of ERK is necessary at many stages during B cell differentiation. In most cell types, ERK phosphorylation and activation usually requires RAF family kinases. Scheffler et al . found that mice lacking both B-Raf and Raf-1 had reduced numbers of pre-B and immature B cells in the bone marrow and mature B cells in the periphery, and they generated fewer plasma cells upon ...

ERK phosphorylation is RAF independent in naive and ...
Potassium is a chemical element with the symbol K (from Neo-Latin kalium) and atomic number 19. Potassium is a silvery-white metal that is soft enough to be cut with a knife with little force. Potassium metal reacts rapidly with atmospheric oxygen to form flaky white potassium peroxide in only seconds of exposure. It was first isolated from potash, the ashes of plants, from which its name derives.

This gene encodes a member of the peroxisome proliferator-activated receptor (PPAR) subfamily of nuclear receptors. PPARs form heterodimers with retinoid X receptors (RXRs) and these heterodimers regulate transcription of various genes. Three subtypes of PPARs are known: PPAR-alpha, PPAR-delta, and PPAR-gamma. The protein encoded by this gene is PPAR-gamma and is a regulator of adipocyte ...
