jQuery detects this state of readiness for you. Code included inside `$(document).ready()` will only run once the page Document Object Model (DOM) is ready for JavaScript code to execute. Code included inside `$(window).on("load", function() { ... })` will run once the entire page (images or iframes), not just the DOM, is ready.

`$(document).ready()` | jQuery Learning Center

Read Book JQuery

jQuery's event system requires that a DOM element allow attaching data via a property on the element, so that events can be tracked and delivered. The object, embed, and applet elements cannot attach data, and therefore cannot have jQuery events bound to them.

.on() | jQuery API Documentation
