Mokume Gane
Mokume-gane (□□□) is a Japanese metalworking procedure which produces a mixed-metal laminate with distinctive layered patterns, as well as that laminate itself. Mokume-gane translates closely to "wood grain metal" or "wood eye metal" and describes the way metal takes on the appearance of natural wood grain.

Mokume gane rings | Etsy
The original Japanese work in mokume gane was almost all done in copper alloys and copper alloys with silver. Those strong color contrasts are one of the things that originally attracted me to mokume gane. It is not because it is cheaper than the precious metals that are in most of my rings. The rings I make are labor intensive.

Why you don't want a copper and silver mokume gane ring ...
Mokume gane is a traditional Japanese metalsmithing technique by which sheets of different metals - generally copper, silver, gold, and alloys of those - are stacked and welded together. This results in a piece of metal that displays a woodgrain-like pattern that shows the different metals' colors.
