Psychology As A Human Science

The first person to treat psychology as a human science was Wilhelm Dilthey, whose two volume treatise, Introduction to the Human Sciences appeared in 1893. Dilthey argued that the natural sciences employ experimental and quantitative research methods which seek to predict and control the behavior of objects, and are therefore inappropriate to the study of human history, psychology or art.

Psychology as a Human Science | Duquesne University

Psychology as a science took a "back seat" until Descartes (1596 - 1650) wrote in the 17th century. He believed strongly in the concept of consciousness, maintaining that it was that that separated us from animals.

Is Psychology a Science? | Simply Psychology

Psychology became both a thriving profession of practitioners and a scientific discipline that investigated all aspects of human social behaviour, child development, and individual differences, as well as the areas of animal psychology, sensation, perception, memory, and learning.

psychology | Definition, History, Fields, Methods, & Facts ...

We can divide psychology into two big areas called experimental psychology and social psychology. Experimental psychology uses classic, laboratory-based, scientific methods to study human behavior: it uses similar techniques to physics, chemistry, or biology, often carried out in a lab, except that instead of studying light rays, chemical reactions, or beetles, the experiments involve ...
