Change

Section 16-2 Evolution as Genetic Change This section explains how natural selection affects different types of traits. It also describes how populations can change genetically by chance as well as the conditions that prevent populations from changing genetically. Where To Download Section 16 2 Evolution As Genetic Changes Answers

Section 16 2 Evolution As Genetic Changes Answers

Section 16-2: Evolution as Genetic Change Natural selection on single-gene traits can lead to changes in allele frequencies and thus to evolution. Natural selection can affect the distributions of phenotypes in any of three ways: directional selection, stabilizing selection, or disruptive selection.
