Steam turbines are being started based on operating instructions developed by turbine manufacturers and constituting an integral part of start-up instructions of a steam unit. The operating instructions describe the order of executing start-up actions and provide the values of operating parameters that should be maintained during start-ups.

A steam turbine locomotive is a steam locomotive which transmits steam power to the wheels via a steam turbine. Numerous attempts at this type of locomotive were made, mostly without success. In the 1930s this type of locomotive was seen as a way both to revitalize steam power and challenge the diesel locomotives then being introduced.
