the same rating.

Capacitor banks may be connected in series or parallel, depending upon the desired rating. As with an individual capacitor, banks of capacitors are used to store electrical energy and condition the flow of that energy.

Why UPS systems use large power capacitors

On line UPS systems contain five main parts: as shown in Figure 1.

1. An AC filter at the input line
2. A rectifier which converts the filtered AC to DC
3. A DC bus, containing both a large battery bank and a DC capacitor bank for bus hold up and DC filtering
4. A power inverter, which converts DC to AC
- 5.
