Baby Teeth Eruption Charts - American Dental Association

Continued No. 6. Ditch the Pacifier by Age 2 or 3. There are lots of good reasons to let your child use a pacifier, but in the long term it can affect how his teeth line up. It can also change the ...

Oral Health for Toddlers: 8 Ways to Protect Your Child's Teeth

Lower teeth usually erupt before upper teeth. Teeth in both jaws usually erupt in pairs -- one on the right and one on the left. Primary teeth are smaller in size and whiter in color than the permanent teeth that will follow. By the time a child is 2 to 3 years of age, all primary teeth should have erupted.

Teeth Eruption Timetable - Cleveland Clinic

Most children begin losing their baby teeth (also called primary teeth) around the age of 6 or 7. But don't fret too much if your individual child loses one at age 4 or doesn't start till age 8 or 9; losing the first tooth anywhere between age 4 and 9 is considered within the "normal" range.

Child Tooth Loss: What's "Normal" and What's Not

There is normally a space between all the baby teeth. This leaves room for the larger permanent teeth to erupt. The eruption sequence can vary quite a bit from child to child. So don't be too concerned if your child's teeth don't follow the pattern above. But if teeth fail to come in a year after the expected time, check with your child's dentist.

Anatomy and Development of the Mouth and Teeth

Decayed or Missing Baby Teeth: Baby teeth serve as a pattern for the placement of permanent teeth. Decayed or missing baby teeth may result in crooked or misaligned permanent teeth, which can, in turn, cause a host of problems. Children may have difficulty chewing with misaligned teeth.
